

Programme des Journées Japonaises au LIMOS

Tuesday 24/09

9h:

- Takashi Horiyama: Enumeration and Counting of the Developments of Polyhedra
- Caroline Brosse: Enumeration of completions in graphs
- Discussions and working groups

13h30:

- Katsuhisa Yamanaka: Enumeration of surrounding polygons
- Yan Gerard: Recognition of Digital Polyhedra
- Discussions and working groups

Wednesday 25/9

9h:

- Shin-ichi Nakano: An Approximation Algorithm for the 2-dispersion Problem
- Simon Vilmin : Representations of ranked convex geometry.
- Discussions and working groups

13h30:

- Kunihiro Wasa: The Perfect Matching Reconfiguration Problem / or, Listing Induced Steiner Subgraphs as a Compact Way to Discover Steiner Trees in Graphs
- Discussions and working groups

Thursday 26/09

9h:

- Takeaki Uno: Supporting Human Thinking in Optimization by Abstraction / Using Clusters as Indicators
- Discussions and working groups

13h30:

- Kazuhiro Kurita: Constant Amortized Time Enumeration of Independent Sets for Graphs with Bounded Clique Number
- Oscar Defrain: Dualization in lattices given by implication bases
- Discussions and working groups

Friday 27/09

- Discussions and working groups
